

Why are Sites advancing with SiteDocs Portal?

"SiteDocs Portal: We have noticed immediate benefits in terms of time and resource efficiencies and have had 100% positive feedback from our key external stakeholders...the sponsors. Essential documents can be provided, viewed and uploaded with a couple of clicks and we now feel that we are on a more even playing field with our research partners." Site, Cancer Research Manager

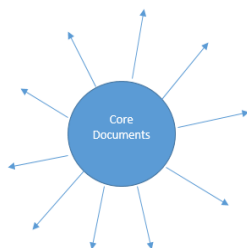

What is SiteDocs Portal?

Three smart modules that infinitely improve quality and efficiencies for the Clinical Trial process, at Sites and CRO/Sponsor.

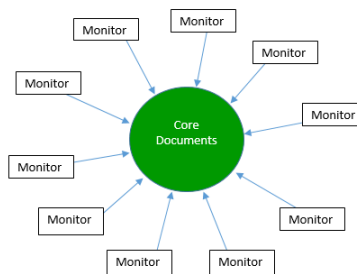

Core Documents: those documents that are central to your Site and traditionally replicated to all your Monitors and Site Start-Up Specialists – using Core Docs, manage these in one place, and provide all Monitors with read-only access. See below for illustration.

Traditional method

Manual provision and update of the **same** docs to all CROs and Sponsors
 Time consuming, repetitive, interruptive and without control

SiteDocs Portal method

Manage/update core documents in one place
 Simply add Monitor as external read-only User, to download for paper and e-TMF
 Reduce admin workload by 90%, auto-naming, doc certification

Document Collaboration: collaborate with a subset of individuals on project specific documentation. Infinite collaborative scenarios. *Template Builder* also available for your local clinical trial management (e.g Digital TMF).

Internal Documents: management of trial related documents for your internal use/view only.

Annual Subscription

Subscription is within budget of all clinical trial units.

How do I register?

Request an online demo at request@trialdocs.com.au and purchase your SDP for your Site.

.....because time with patients is more important!
